

I am trying to interface with an ADS1015 using an STM32F103. I am having problems reading two bytes from the ADS1015. The first byte is received perfectly, but the second byte is exactly the same as the first byte which is incorrect. I think this is because the master (STM32) is not acknowledging the bytes being received. This can be seen below. This is what should be seen according to the datasheet.

However instead this is seen

You can see that the master should be pulling the line low at these points (Acknowledging) but it is not doing this. Here is my code

```
#include "stm32f1xx.h"
#include "stm32f1xx_hal.h"
#include "stm32f1xx_hal_conf.h"

#define I2C_SPEEDCLOCK 1000000

I2C_HandleTypeDef I2cHandle;

```

I think my receive function is wrong because it is not acknowledging the data. How can I get it to acknowledge the data?
